- Crews have replaced 150 transmission and distribution poles, 41 transformers and restrung 50,000 feet of wire.
- Southern California Edison (SCE) anticipates power will be restored to all areas of the fire by the end of 6/30/16.

Recovery

Initial Damage Estimates and Preliminary Damage Information:

- Kern County Building, Environmental Health and Sheriff's Office representatives conducted an assessment in Squirrel Valley and South Lake. Public Health teams assessed properties affected by the fire for debris management and initial hazards; and are in the process of reviewing water systems in the area. Building Inspection teams assess safety of the structures and placed a colored tag on each structure: Red means do not enter or occupy structure; Yellow means restricted access, and specific instructions are written on the tag; and Green means lawful occupancy permitted and that no apparent structural hazard has been found.
- Cal OES Public Assistance has deployed two Disaster Assistance Programs Specialists to the Kern County EOC to coordinate hazardous materials debris operations.

Debris and Hazardous Waste Management

- Cal Recycle standing by for situational awareness and possible tasking for debris removal and are in contact with local authorities concerning landfill capacity.
- Kern County authorities will decide whether to use the public health declaration to allow DTSC in to remove the hazardous materials or if signed access agreements will be required from each property owner first (likely to delay work 2-3 weeks). DTSC is in a holding pattern until the decision is made.

Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

Slight Chance of Thunderstorms Eastern Areas Late Today. A weak low pressure trough will be over the Northern California region through Independence Day. Thunderstorms are expected just to the east and southeast of the region late today, and there is a slight chance that storms may form in or drift into our eastern areas from Lassen County southward. These storms would produce light rainfall, if they develop. The trough will also produce afternoon cumulus over the higher terrain throughout the region through July 4th, and isolated showers may develop. At this time thunderstorms are not expected elsewhere through July 4th. Afternoon inland temperatures will be, only 2-5 degrees above normal by the 4th. A deeper marine layer will keep coastal regions mild and stronger seas breeze winds will develop each afternoon. Diurnal, locally driven afternoon wind patterns will prevail in most areas, so seasonable wind speeds and directions are expected during the afternoon peak burning period each day. The trough will strengthen over the area beginning Tuesday and produce more cloudiness and S to W wind, especially east of the crest. Temperatures will also drop to normal or slightly below normal midweek. There is a chance of showers or thunderstorms on Wednesday.

SOUTHERN CALIFORNIA

Outflow from stationary thunderstorms over northern Arizona has pushed into portions of Southern California. Isolated storms will also be possible on desert adjacent areas of the Cleveland and San Bernardino National Forests. This afternoon, isolated showers and storms will develop further north in the Sierras and Inyo N.F. Most, if not all, storms should produce some rainfall. A developing trough is expected to deepen across the West Coast which will scoot most of the moisture east of the area today and Sunday. Onshore flow will strengthen the next two days which will allow for west winds of 15-25 mph with gusts to 45 mph to develop each afternoon in the Antelope Valley and the Kern County Mountains. Minimum RH levels will approach 10% in and near the Antelope Valley during the afternoon hours. High temperatures will trend downward over the next few days and there will be an increase in marine layer coverage this weekend. Highs the next few days will be in the 70s along the coast, lower 90s in the valleys to 95-100 in the San Joaquin Valley. Minimum RH will be 15-20 percent from 2,000 to 4,000 feet above and inland from marine layer each afternoon. No thunderstorms are expected except in the eastern deserts after today. Next week, models indicate a ridge may develop across the Southwest which would result in a warming trend. It will continue to be windy in and near the desert interface areas each afternoon through the middle of next week.
